

AI DESIGN GROWTH RETENTION 2025–26

New User Onboarding for M365 Copilot Mobile

Turning a confusing first run into a guided first success — so new users feel Copilot's value before they're asked to trust it.

~40K Net-new weekly prompting users — no acquisition spend	1.6–1.8× Lift in consumer Week-1 activation	0 Retention regressions across iOS & Android

ROLE Senior Product Designer	PRODUCT M365 Copilot Mobile	SCOPE Strategy · UX · Prompt Design · E2E Flows	PLATFORM iOS · Android
---------------------------------	--------------------------------	--	---------------------------

01 / THE PROBLEM

New users left before Copilot ever proved its worth.

The first run leaned on generic prompts and silent failures. Most new users never sent a meaningful prompt — and most never came back.

Only ~26% of new iOS users — and 19.5% on Android — ever became chat-active. The funnel was leaking at the very first step.

02 / THE INSIGHT

Stop touring features. Engineer a first success.

"If the first interaction feels useful, users come back. If it doesn't, they won't."

So the whole first run was rebuilt around a single moment: the user's *first prompt succeeding* — and a Week-1 target of every new user submitting one.

03 / THE DESIGN

Three moves that changed the equation.

- 01 **Personalized first prompts**

Work-graph prompts for M365 subscribers; quick-win prompts for consumers. Never generic suggestions.
- 02 **Silent progressive setup**

Eligibility and setup run in the background. Users reach chat only when Copilot is ready.
- 03 **Control as a constraint**

Dismissable at every step. Trust earned through quality, never forced engagement.

DESIGN EXPLORATIONS

Early flows and iterations — working through structure, density and hierarchy before landing on the final direction.

THE FIRST-RUN FLOW

Perceived latency turns a technical wait into a moment of personalization. The hero prompt arrives pre-filled and contextual — built to succeed. The response confirms Copilot understands the user's world.

END TO END

This one's better in motion 🎬

PDFs can't play video. Watch **onboarding-end-to-end.mov** in the project's **Videos** folder.

04 / EXPERIMENTATION

Two patterns. One quick test.

Two design patterns were on the table — Treatment A and Treatment B. To find out what actually worked before committing, we shipped both into a small A/B test with 5% of users, then finalized the pattern based on what moved the metric.

05 / IMPACT

Onboarding became a measurable growth lever.

NET NEW PROMPTING USERS WOW	Reversed the decline First-time prompting reversed its drop after earlier IA changes.
+1.6–1.8× Consumer paid users Week-1 Copilot Active users	+1.1–1.2× Premium SKU Week-1 Copilot Active users
	Stable retention No negative signals. Consistent across Android & iOS.

06 / MY ROLE

Sole designer, end to end.
