

AI DESIGN PROACTIVE ASSISTANCE GROWTH 2026

Proactive Assistance: Daily Brief and More

A proactive mobile experience that surfaces a timely daily brief and action cues — so people start their day prepared, not hunting across apps.

- 3+**

Proactive scenarios powered by one framework
- ~2:1**

Positive-feedback ratio in early rollout
- 1 → ∞**

One surface, many proactive scenarios

ROLE Senior Product Designer

PLATFORM iOS & Android

SCOPE UX Framework • Flows • End-to-End Ownership

01 / THE PROBLEM

Mornings start fragmented. Tools wait to be opened.

People jump across email, chat, and calendar just to understand their day. The information existed — it simply never surfaced when it mattered.

Only 22% of users felt prepared at the start of their day — and 68% regularly missed something important.

02 / THE INSIGHT

Don't add another app. Prepare the user before they ask.

“The problem wasn't missing information — it was that none of it surfaced when it mattered.”

So instead of designing moments one by one, I built a single repeatable loop every proactive experience had to follow — one shared bar for what "good" looks like.

03 / THE DESIGN

Timing, simplicity, and scale — in that order.

- 01 Action-first content**

Always answering "What can I do right now?" No clear action, no moment shipped.
- 02 Familiar response patterns**

Emails surface like inbox summaries; meetings follow calendar layouts. No learning curve.
- 03 Designed to scale**

One entry point hosts daily brief, meeting prep, catch-ups and agent actions — no redesign.

DESIGN EXPLORATIONS

Iterations across entry strategies, response formats, and content depth — balancing usefulness with intrusiveness.

TRIGGER / ENTRY POINT

- Push Notifications**

Promotional notifications are used lightly for discovery. Scheduled notifications let users receive a daily brief or action summary at a chosen time — creating a consistent habit without feeling invasive.
- In-product Chat Pill**

Within the product, the entry point sits in the chat screen. The first pill hosts the daily brief and other scenarios too. A subtle visual cue paired with haptic feedback makes discovery feel playful and natural.

PILL DISCOVERY

The pill reveals its scenario icons on load and pairs the motion with haptics — making the entry point feel alive without being intrusive.

RICH RESPONSE

- Daily Brief**

Meeting summaries, email highlights, and people cues — surfaced in a scannable layout optimised for the start of your day.
- Tasks assigned across Me**

Tasks assigned on email, chat, and meetings — consolidated into a single actionable list with source context and quick actions.

SCHEDULE: REPEAT USAGE

END-TO-END FLOW

SCALABLE SURFACE

04 / IMPACT

Users felt more prepared — not just more informed.

- EARLY INTERNAL ROLLOUT FEEDBACK SIGNAL**

~2:1

Positive feedback ratio — users reported better clarity and faster prioritisation at the start of their day.
- Better clarity**

Users arrived at their day's priorities faster — without opening multiple apps.
- 3+**

Proactive scenarios

Daily brief, meeting prep and catch-ups — all from one entry point in the Copilot app
- Scalable surface**

Same entry point supports daily brief, meeting prep, catch-ups, and more
- Timing + relevance**

When both come together, users feel prepared — not interrupted.

05 / MY ROLE

Sole designer, end to end.

- Strategy & scope**

Set direction and pressure-tested the spec with the PM.
- Research & data**

Grounded every decision in user research and telemetry.
- System & framework**

Built the reusable loop powering 3+ proactive scenarios.
- End-to-end UX**

Concept to ship — flows, motion, iOS & Android.
- Leadership reviews**

Presented at milestones; aligned design with strategy.
- Impact tracking**

Read live rollout feedback weekly to iterate.
